

 FusionAuth Presents:

Signal the Auth Hound

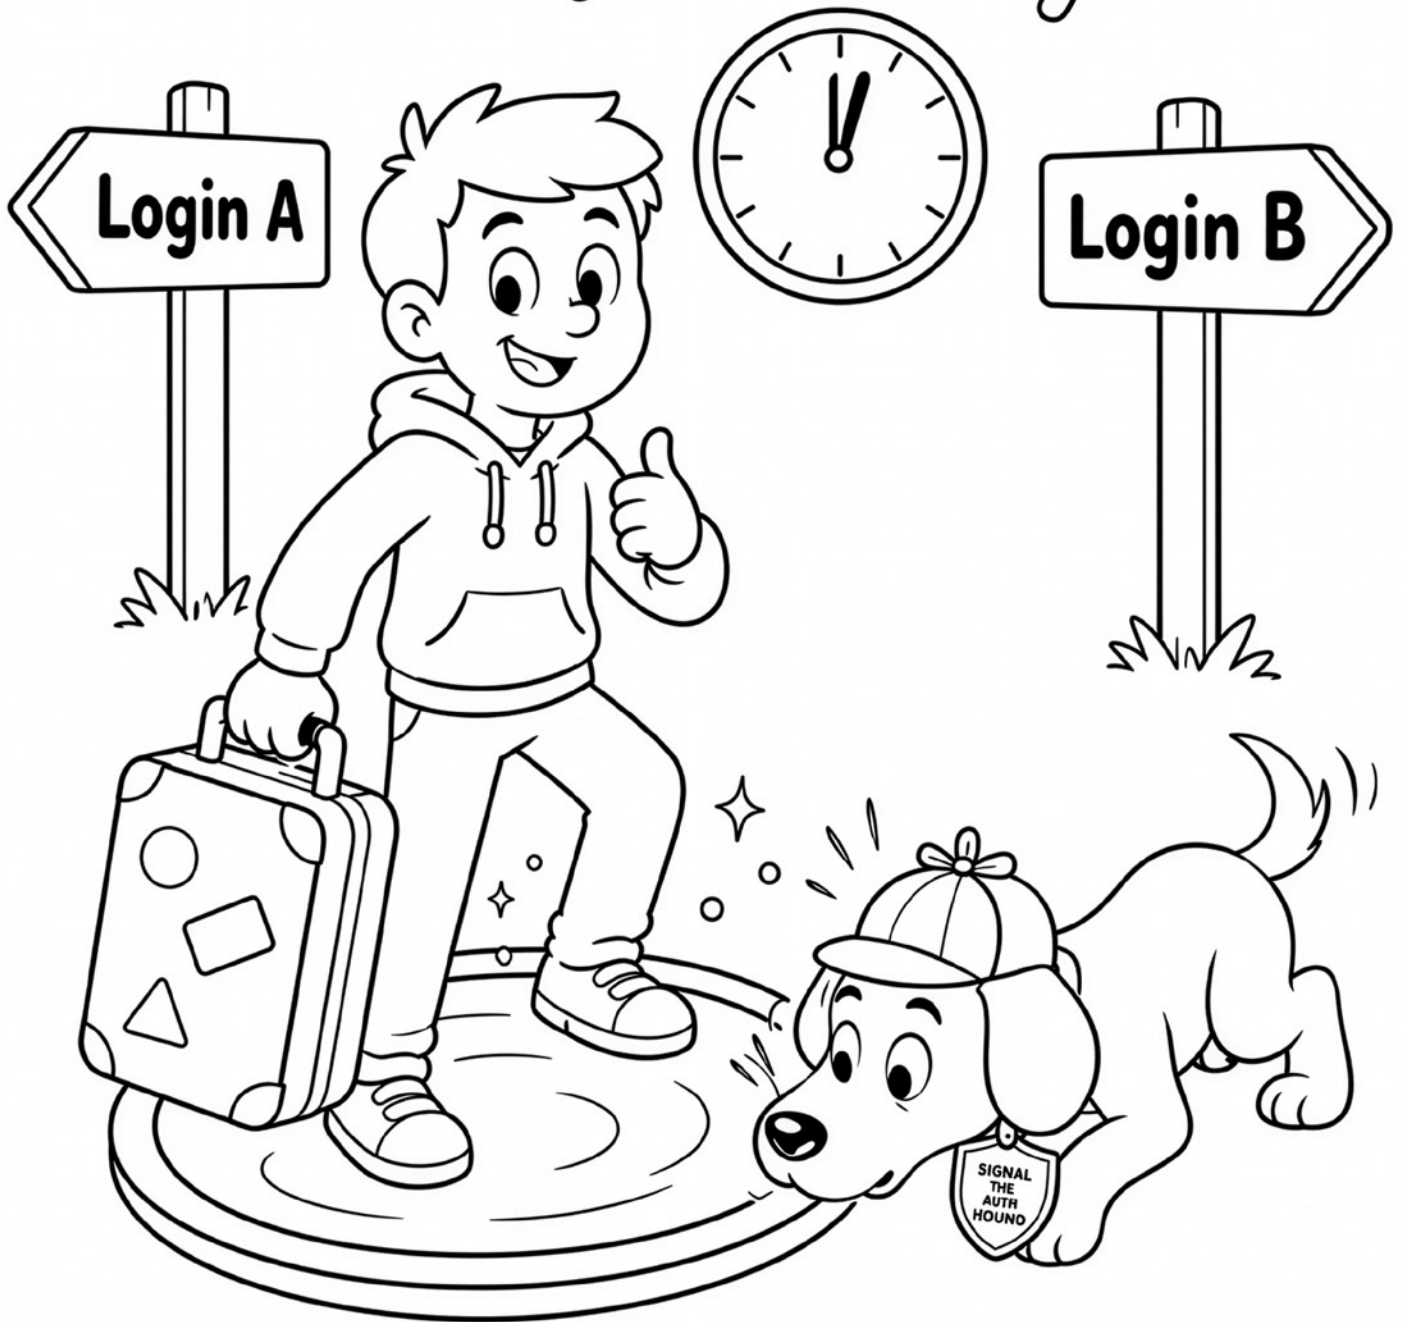

and the Case of the Weird Logins

An Intelligent MFA Coloring Book
About Suspicious Login Clues

Impossible Travel

Teleport Terry

**Signal followed the scent and discovered Teleport Terry
couldn't possibly be in two places at the same time!**

Untrusted Device

Shady Tablet Sam

This device had never earned a trusted badge before, so Signal stopped Shady Tablet Sam for an extra identity check.

Unrecognized Device

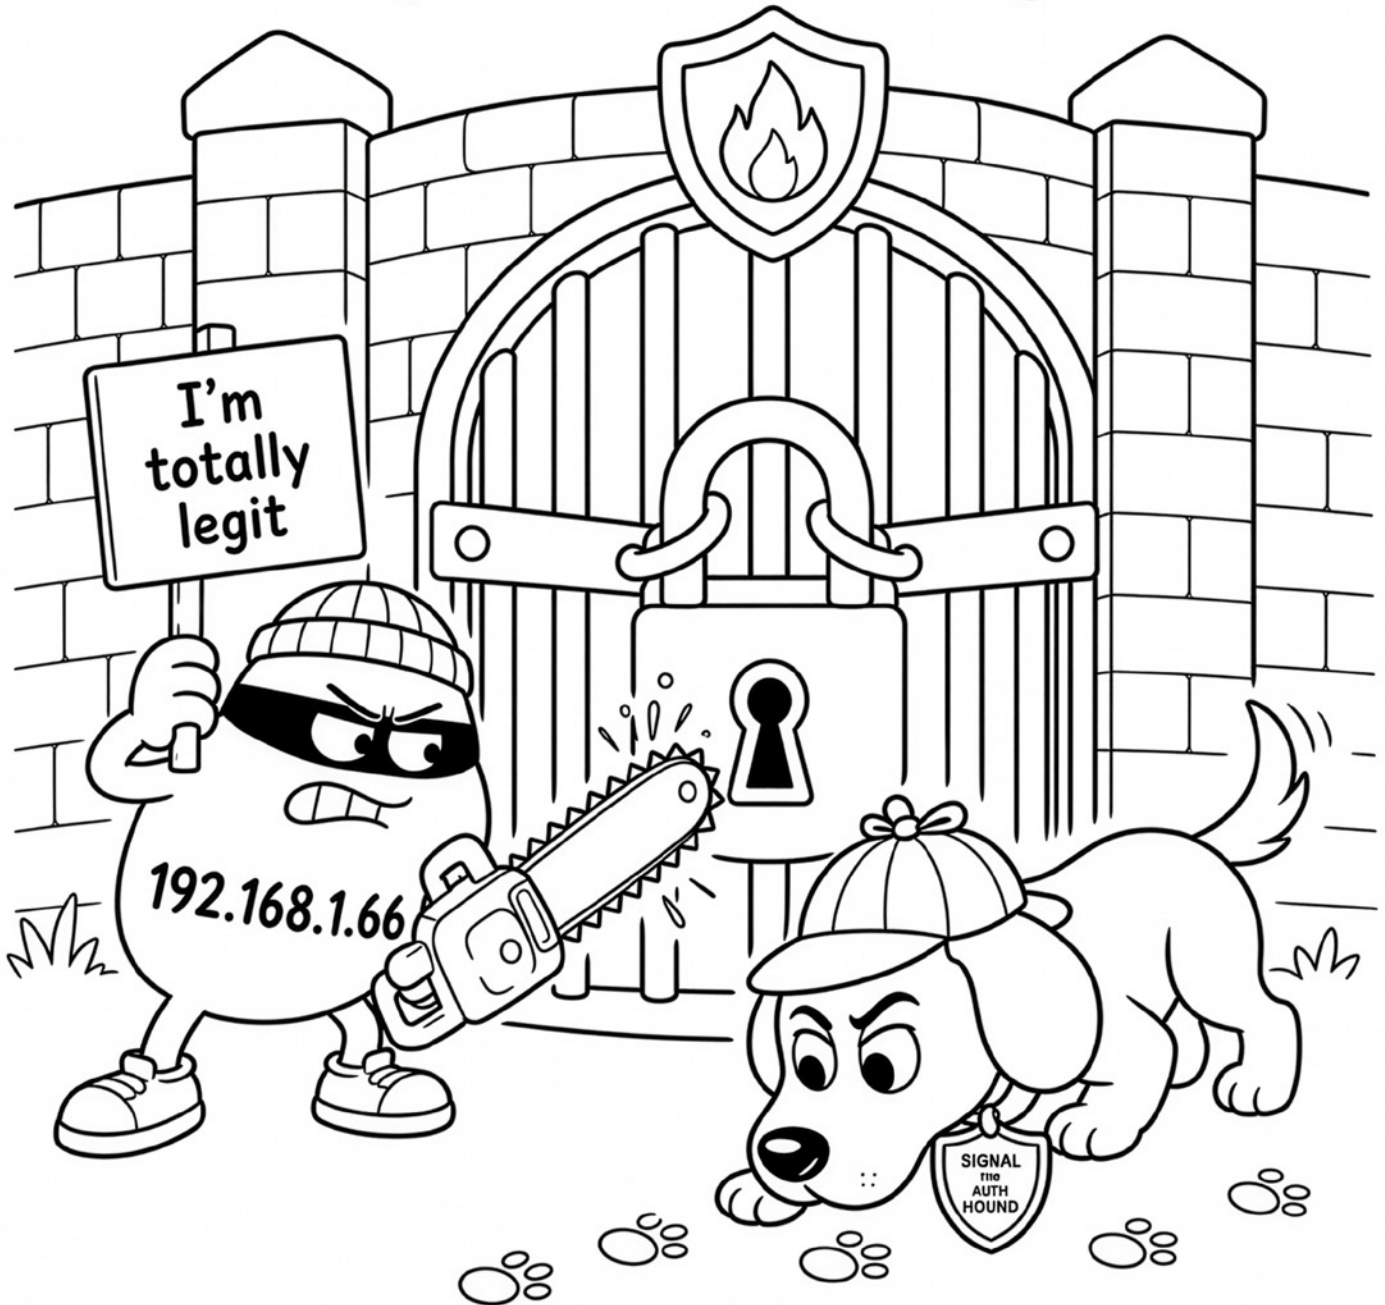

Unknown Unit Uma

**Signal spotted a device he'd never seen before.
New devices deserve a closer sniff before they get inside.**

Blacklisted IP

Blocked Bob

**Signal caught the scent of trouble and stood guard,
keeping Blocked Bob outside the gate.**

Stale Credentials

Cobweb Carl

Signal sniffed the dust on Cobweb Carl's old password and sent him for an extra identity check.

Suspicious Password Reset

Password Panic Patty

**Signal caught the scent of something suspicious.
A last-minute password change is a clue worth sniffing out.**

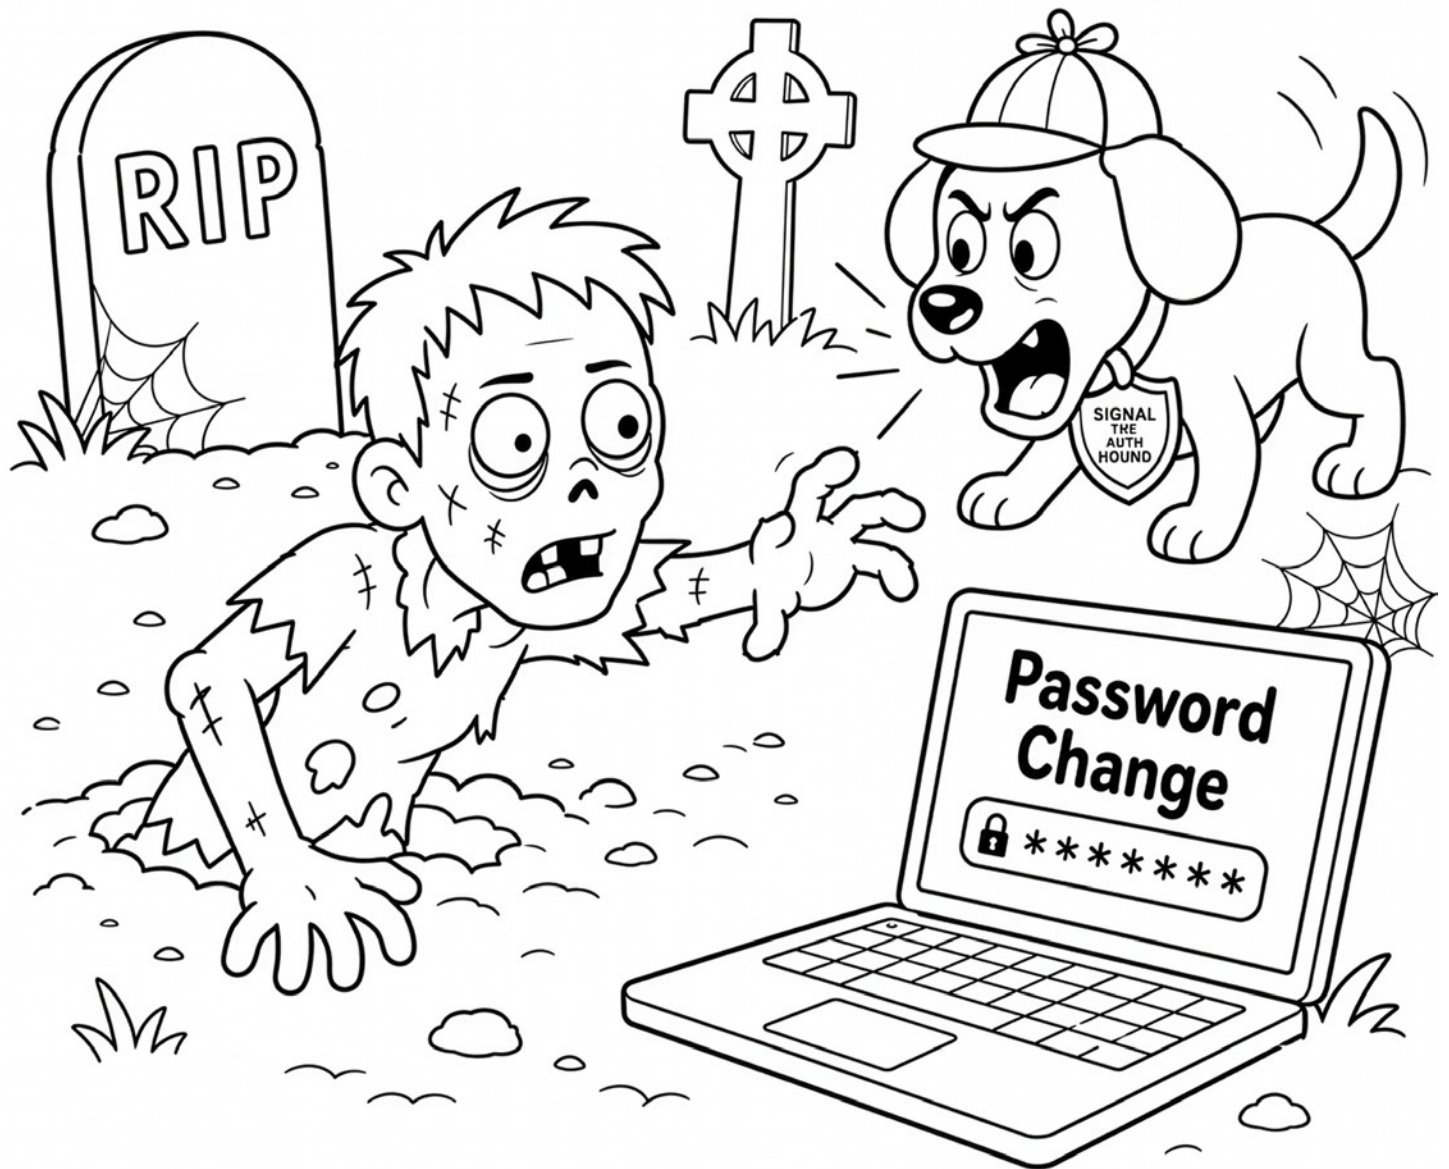

Account Owner Change Captain Switcheroo

Someone tried changing who owned the account. Signal barked before Captain Switcheroo could steal the controls.

Dormant Account Reactivation

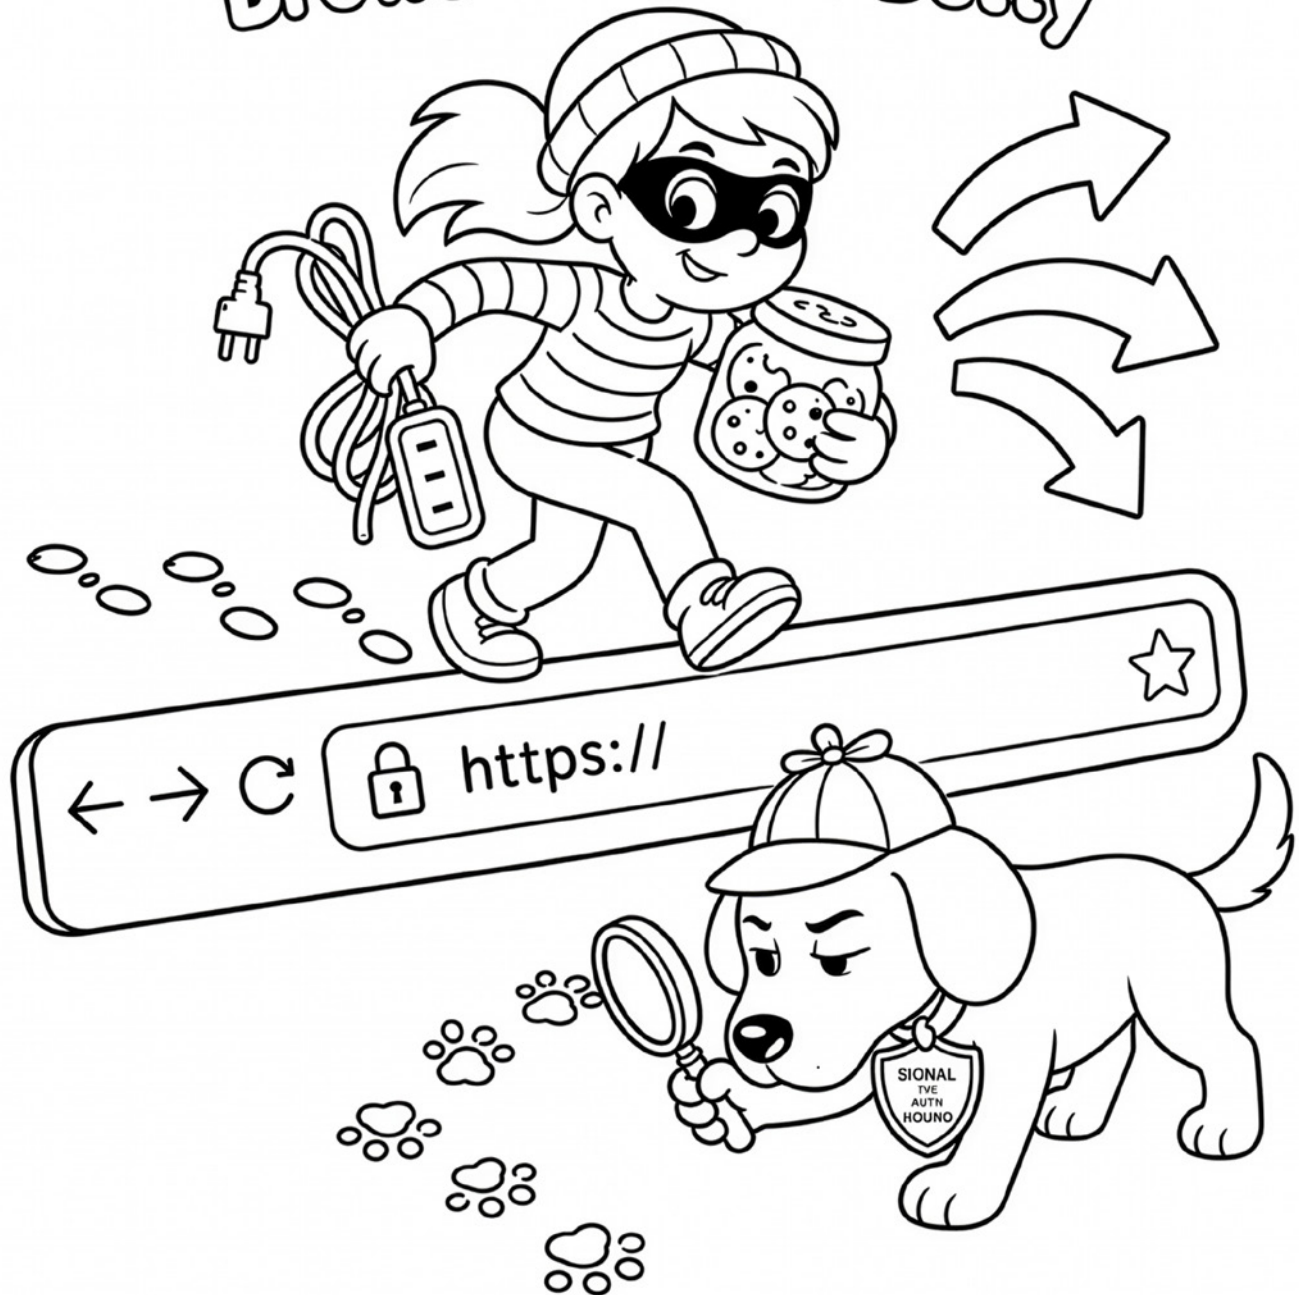

Zombie Login Larry

Zombie Login Larry woke up an account that had been sleeping for years. Signal decided to take a closer sniff.

Suspicious Browser Activity

Browser Bandit Betty

Betty's browser left suspicious clues behind. Signal followed the trail and knew something wasn't right.

Bot Detected

Botzilla

**No human can race through thousands of logins that fast.
Signal sniffed out the bot before it could cause trouble.**

Great detectives follow the clues. So does FusionAuth.

FusionAuth evaluates every login against up to 10 independent risk signals, giving your authentication system the context it needs to distinguish legitimate users from attackers. More context means more accurate decisions, fewer unnecessary MFA challenges, and better protection against account takeover.

Deploy anywhere. Protect everywhere.
